

AMENDMENTS TO THE SPECIFICATION:

Page 5, between lines 18 and 19, please remove the following:

~~--FIG. 7 is a further view of the device of FIG. 1 showing movement of the projection below the detent.--.~~

Please replace the paragraph beginning at page 9, line 15, with the following rewritten paragraph:

--On the other hand, a click impression or a feeling of engagement from the lock mechanism 8 can inform the user whether the pressure of the fingertip is sufficient or not. In other words, a user can adjust the pushing power of the fingertip until the click impression is obtained. Until the click impression is obtained, the user continues to push the contact surface 6 and may increase the pressure. Thus, the click impression notifies the user of unnecessary of pushing the contact surface 6 any more. Therefore, the click impression prevents insufficient and surplus pressure of the fingertip. ~~Figure 7 shows the projected portion 6b below the recessed portion 10a under the influence of surplus pressure.--.~~
